Vocabulary	<p>Use and understanding of vocabulary is crucial to our maths curriculum and we strive to ensure children can use and explain a range of vocabulary. Maths vocabulary is detailed within Maths No Problem. Staff are advised to begin each unit by gathering Vocabulary from the unit, discussing and putting onto the maths working wall. This can then be added to throughout the unit.</p> <p>Additionally, there is an EYFS vocabulary list below and a list of mathematical vocabulary to be learned by the end of Y6.</p>							
How has the maths curriculum taken into account the needs of our children?	<p>Our curriculum is accessible to all through the use of the core mastery concepts listed above.</p> <p>Throughout year groups we use the path of practical-pictorial-abstract to tackle concepts. As such this enables children to access the lesson in a way that fits them. At no point do we insist that the practical equipment needs to be taken away and this is beneficial to children who are struggling learners of those with SEND as we can tailor learning to them.</p> <p>In addition to this, one of the core concepts of mastery is 'variation'- in particular 'procedural variation.' This means that questions are written to slowly build knowledge, building to greater depth questioning throughout. As such, for struggling/SEND learner we can ask them to complete the first few questions and then move onto additional work based on these questions to ensure that they has mastered this element.</p> <p>We aspire that all of our learners will achieve in each lesson and we use daily intervention to ensure any gaps or misconceptions are plugged on the day meaning that every child can access the whole lesson.</p> <p>In some cases, children will not be able to access the curriculum at the same level of the peers. The children will have an individualised action plan to ensure that the curriculum is adapted to their needed. This action plan will be evaluated and updated termly.</p> <p>For children who are more able, we want them to be able to deepen their knowledge and understanding of the day's learning. One way of ensuring the more able are demonstration their greater understanding is through explanation. This can be through explanation to their peers in different parts of the lesson and can also be part of their challenge work at the end of the lesson. An ability to clearly articulate their own understanding of what they have learnt shows a mastery. Additionally, each classroom has a challenge area where children can find tailored questions that relate to their current topic. These questions present the same learning in different contexts so that children have to be able to manipulate their learning to answer these questions</p>

## Maths Whole School Overview

This vocabulary list of 142 words and phrases details the words and definitions that children need to know and use by the end of Key Stage 2. It is adapted from the *'Ultimate Maths Vocabulary List'* from Third Space Learning.

<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Acute</b>	Describes angles between 0 and 90 degrees.	
<b>Addition</b>	One of the four calculation operations. It involves combining two or more numbers to create a sum/total. The inverse of subtraction.	
<b>Adjacent</b>	Adjoining (as used to describe lines and angles).	
<b>Alternate</b>	Every other one in a sequence.	
<b>Angle</b>	A measure of turn - the number of degrees rotated around a point.	
<b>Area</b>	The measure of surface within a perimeter expressed in square units.	
<b>Array (rectangular)</b>	A set of items arranged in rows and columns in the shape of a rectangle. Each row has the same number of items in it. Each column has the same number of items in it.	
<b>Ascending order</b>	The arrangement of numbers from least to greatest.	
<b>Average</b>	A number representing a greater set of numbers. Can have three interpretations:	

Maths Whole School Overview

	mean - dividing the total of the numbers by the numbers itself; median – the middle value when the numbers are in ascending or descending order; mode – the value that occurs most often in the set.	
<b>Axis of symmetry</b>	A line dividing a shape into two symmetrical parts.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Bar chart/graph</b>	A graphical representation of data in which values are represented by bars or columns and interpreted using the scales on the axes.	
<b>Bar model</b>	A way of representing relationships in a structured diagram in which numbers are shown using bars (rectangles).	
<b>Base</b>	The line or face on which a shape is standing.	
<b>Base angles</b>	Those angles adjacent to the base of a shape.	
<b>Bisect</b>	To divide into two equal parts.	
<b>Block graph</b>	A way of representing discrete data in which each item is represented by one block/square arranged in columns. The frequency of a particular set is how many blocks or squares are in it.	

## Maths Whole School Overview

<b>Breadth</b>	Breadth is another name for width. It is the distance across from side to side or the shorter measurement with the longer one described as length.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Capacity</b>	The amount of space in an object (the maximum amount of liquid or air it can contain).	
<b>Cardinal number</b>	A number that shows quantity but not order.	
<b>Carroll diagram</b>	A diagram used for classification identifying whether members of the set possess a given property or not.	
<b>Circumference</b>	The distance around a circle (its perimeter).	
<b>Circle</b>	A 2-D shape in which all of the points on the edge are of equal distance from the centre of the shape.	
<b>Composite number</b>	A number with more than two factors.	
<b>Cone</b>	A 3-D shape made of one circular face and a curved surface tapering to a point (apex) directly above the centre of the circular face.	
<b>Congruent</b>	Congruent shapes are the same shape and size (equal).	

## Maths Whole School Overview

<b>Consecutive</b>	Consecutive numbers follow in order without interruption (e.g. 2,3,4,5).	
<b>Continuous data</b>	Data that can take any value along a continuum, e.g. as a child's foot grows, it will go through all the values of 18.1cm, 18.2cm, 18.3cm etc.	
<b>Coordinates</b>	Numbers used to describe position of a point on a grid.	
<b>Cube</b>	A regular six-sided polyhedron in which the faces are all congruent squares.	
<b>Cuboid</b>	A six-sided polyhedron in which all the faces are rectangles. Otherwise known as a rectangular prism.	
<b>Cylinder</b>	A 3-D shape made of two congruent circular faces that are opposite each other and a curved surface joining them.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Decagon</b>	A polygon with ten sides and angles.	
<b>Decimal</b>	A way of expressing fractions in the Base 10 number system. Fractional parts are expressed in tenths, hundredths, thousandths etc.	
<b>Denominator</b>	The number below the line in a	

## Maths Whole School Overview

	fraction which shows how many equal parts the whole has been split into.	
<b>Descending order</b>	The arrangement of numbers from the greatest to least.	
<b>Diagonal</b>	A straight line connecting two non-adjacent vertices (corners) of a polygon.	
<b>Diameter</b>	A line across a circle that passes through the centre and touches the circumference at each end.	
<b>Difference</b>	The answer to a subtraction calculation. A form of subtraction in which two amounts/numbers are compared. By how much a number is greater or less than another.	
<b>Digit</b>	The numerical symbols from 0 to 9 (inclusive). Digits can be arranged to numerically represent numbers.	
<b>Digital root</b>	The digital root of 58 is 4 because $5 + 8 = 13$ and $1 + 3 = 4$	
<b>Dimensions</b>	The measurements of a shape (i.e. length, width, height).	
<b>Discrete data</b>	Data that can only take specific values, e.g. as a child's foot grows, the shoe sizes needed can only have given sizes.	
<b>Division</b>	One of the four calculation	

Maths Whole School Overview

	operations. It can be interpreted as: repeated subtraction (grouping) – finding how many groups of a given equal size can be made from a number; sharing a number into equal parts. It is the inverse of multiplication.	
<b>Dodecagon</b>	A twelve sided polygon.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Edge</b>	The intersection of two faces/curved surfaces of a three-dimensional object.	
<b>Equation</b>	A statement of equality between two expressions (e.g. $3 \times 4 = 6 + 6$ ).	
<b>Equilateral triangle</b>	A triangle with congruent (equal) sides and angles. It also has three axes (lines) of symmetry.	
<b>Even number</b>	A positive or negative number exactly divisible by 2.	
<b>Exterior</b>	Outside.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Face</b>	A plane (flat) surface of a three-dimensional object.	
<b>Factor</b>	A number which will divide exactly into another number.	
<b>Fraction</b>	A number in its own right that can be positioned on a number line. A way of expressing a proportion	

Maths Whole School Overview

	(part of a whole). The outcome when you divide an integer by another integer (e.g. $3 \div 4 = \frac{3}{4}$ )	
<b>Frequency</b>	The number of times something occurs within a study.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Greater than</b>	An inequality between numbers. The symbol used to represent greater than is an arrow pointing towards the smallest number.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Hemisphere</b>	A 3-D shape made up of a circular face and a curved surface. It is half of a sphere.	
<b>Hendecagon</b>	A polygon with eleven sides and eleven angles: also called an undecagon.	
<b>Heptagon</b>	A polygon with seven sides and seven angles: also called a septagon.	
<b>Hexagon</b>	A polygon with six sides.	
<b>Horizontal</b>	Describes a line or plane parallel to the horizon.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Improper fraction</b>	A fraction whose numerator is equal to or greater than its denominator.	
<b>Integer</b>	A negative or positive whole	

Maths Whole School Overview

	number.	
<b>Interior</b>	Inside.	
<b>Intersection</b>	The point or line where two lines or two faces meet.	
<b>Irregular shapes</b>	Polygons which do not have all equal sides and angles or polyhedrons which do not have all congruent faces and angles.	
<b>Isosceles triangle</b>	A triangle which has two sides of equal length and two equal angles. It also has one axis (line) of symmetry.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Kite</b>	A quadrilateral that has two adjacent pairs of sides that are equal in length, and at least one pair of opposite angles are equal.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Less than</b>	An inequality between numbers. The symbol used to represent less than is an arrow pointing towards the smallest number.	
<b>Line of symmetry</b>	(See axis of symmetry).	
<b>Line graph</b>	A representation of data collected over time. Each point along the line has a meaningful value.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Mass</b>	The measurement of the quantity of matter in an object, measured in	

Maths Whole School Overview

	grams and kilograms.	
<b>Mean</b>	An average of a set of numbers. The sum of the values in a set of data divided by the total number of items in that set.	
<b>Median</b>	An average of a set of numbers. The middle value when the numbers are in ascending or descending order.	
<b>Mode</b>	An average of a set of numbers. The value that occurs the most often in a set of data.	
<b>Multiple</b>	The product of a given number with another factor.	
<b>Multiplication</b>	One of the four calculation operations. It can be interpreted as: repeated addition – adding the same number to itself a number of times; scaling – making a number so many times greater (or smaller) It is the inverse of division.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Negative number</b>	A number less than 0. Indicated by a - sign before the numeral and read as 'negative 4' for -4. Colloquially said as 'minus 4', especially when	

## Maths Whole School Overview

	referring to temperature.	
<b>Nonagon</b>	A polygon with nine sides and angles.	
<b>Number</b>	A quantity, measurement or label indicating a value.	
<b>Numeral</b>	The written symbol used to represent an amount, value or label. For example the number three hundred can be represented by the numeral 300 or CCC using Roman numerals.	
<b>Numerator</b>	The number above the line in a fraction which shows the number of denominator parts considered in a fraction.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Oblique</b>	Oblique means sloping or slanting.	
<b>Oblong</b>	A polygon with two pairs of straight, unequal sides and four right angles. An irregular rectangle.	
<b>Obtuse angle</b>	An angle between 90 and 180 degrees.	
<b>Octagon</b>	A polygon with eight sides and eight angles.	
<b>Octahedron</b>	A polyhedron with eight faces.	
<b>Odd number</b>	A number that when divided by two leaves a remainder of one.	
<b>Ordinal number</b>	Describes a position in a sequence	

Maths Whole School Overview

	e.g. first, second, third etc.	
Term	Definition	Notes
<b>Parallel lines</b>	Lines with no common points and always the same distance apart.	
<b>Parallelogram</b>	A four-sided polygon with opposite sides equal and parallel and the opposite angles are equal in size.	
<b>Part-part-whole</b>	The understanding of how a number (whole) can be shown to be the sum of two parts. It can be used to represent the relationship between the four operations.	
<b>Partition</b>	The action of splitting a number into parts.	
<b>Pentagon</b>	A polygon with five sides and angles.	
<b>Percentage</b>	A way of describing a proportion of an amount by expressing it out of (every) 100.	
<b>Perimeter</b>	The distance around the boundary of a shape.	
<b>Perpendicular line</b>	A line at right angles to another line or plane. <i>NB The lines do not have to be touching.</i>	
<b>Pictogram</b>	A way of representing discrete data in which a picture or icon is used to represent each item or a given number of items.	
<b>Pie chart</b>	A way of representing data where	

Maths Whole School Overview

	the total is represented by a circle (pie) and each category shown by a sector of the circle which indicates the frequency of the category.	
<b>Polygon</b>	A plane (flat) shape with straight sides.	
<b>Polyhedron</b>	A three dimensional shape with plane (flat) faces.	
<b>Place value</b>	Indicates the position of a numeral (e.g. the place value of the 3 in 738 is 30) and how numbers relate to other numbers within the Base 10 number system.	
<b>Prime number</b>	A number with only two factors, 1 and itself (e.g. 2,3,5,7,11, 13, 17, 19, 23...)	
<b>Prism</b>	A polyhedron (3-D shape with faces and no curved surfaces) in which opposite ends are congruent and these are joined by rectangular faces.	
<b>Product</b>	The result when two or more numbers are multiplied.	
<b>Pyramid</b>	A polyhedron made of a polygon base with straight edges coming from each vertex of the base meeting at a single point (apex). All the other faces are therefore	

Maths Whole School Overview

	triangular.	
Term	Definition	Notes
<b>Quadrant</b>	The sectors of a coordinate grid are called quadrants. They are named first (+,+), second (-,+), third (-,-) and fourth (+,-) A quarter of the area of a circle which also contains a right angle.	
<b>Quadrilateral</b>	A polygon with four sides and angles.	
<b>Quotient</b>	The result when one number is divided by another number.	
Term	Definition	Notes
<b>Radius</b>	A line in a circle from the centre to the edge. It is half the diameter.	
<b>Ratio</b>	An expression of the comparison between two or more quantities found by dividing one quantity by the other.	
<b>Rectangle</b>	A quadrilateral with opposite sides equal and parallel and containing four right angles.	
<b>Rectilinear</b>	A polygon made of lines meeting at right angles.	
<b>Reflection</b>	The image of a shape in a 'mirror line'. Corresponding points of the shape and its reflection are equidistant from the 'mirror line'.	

Maths Whole School Overview

<b>Reflex angle</b>	An angle greater than 180 degrees.	
<b>Regular</b>	In geometry when a polygon has sides of equal length and angles of equal size or when a polyhedron has congruent faces and internal angles where faces meet. The only regular polyhedrons are tetrahedron, cube, octahedron, dodecahedron and icosahedron.	
<b>Rhombus</b>	A parallelogram with equal length sides. Opposite sides are parallel and opposite sides are equal in size.	
<b>Roman numerals</b>	Seven letters are used in combination to write numbers: I = 1 V = 5 X = 10 L = 50 C = 100 D = 500 M = 1000	
<b>Rotation</b>	Turning around a given point – the centre of rotation.	
<b>Rotational symmetry</b>	A shape is said to have rotational symmetry if it looks the same in different positions when rotated about its centre.	
<b>Rounding</b>	An approximation used to express a number in a more convenient way.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Scalene triangle</b>	A triangle that has three sides of different length and no equal

	angles.	
<b>Semi-circle</b>	A 2-D shape with one straight side and one curved edge. It is one half of a circle.	
<b>Sphere</b>	A 3-D shape with one curved surface in which every point on the surface is equidistant from the centre of the shape.	
<b>Squared</b>	A number squared is a number multiplied by itself.	
<b>Square number</b>	The product of a number multiplied by itself. A number whose units can be arranged into a square (e.g. 1, 4, 9, 16, 25, 36, 49, 64...).	
<b>Subtraction</b>	One of the four calculation operations. It can be interpreted as: - take away, in which one number is removed from another; - difference, in which two numbers are compared.	
<b>Sum</b>	The result when two or more numbers are added together.	
<b>Symmetrical</b>	A shape is symmetrical if it is identical on either side of a line dividing it into two parts.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Tally</b>	A system of collecting data when

	the final total for each category cannot be determined immediately. Items are recorded using vertical lines for numbers less than 5 and an oblique line across the vertical lines to show a group of 5.	
<b>Temperature</b>	The measure of hot and cold.	
<b>Tessellation</b>	Shapes fitted together with a number of exact copies and with no overlaps or gaps.	
<b>Tetrahedron</b>	A polyhedron with four faces.	
<b>Translation</b>	This takes place when a shape is moved from one place to another just by sliding it (without rotating, reflecting or enlarging).	
<b>Trapezium</b>	A quadrilateral with only one pair of parallel sides.	
<b>Triangle</b>	A polygon with three sides and angles. They can be scalene, isosceles or equilateral, and also described as right angled.	
<b>Triangular number</b>	A number created by adding consecutive numbers from starting from 1). A number whose units can be arranged into a triangle (e.g. 1, 3, 6, 10, 15, 21...)	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Venn diagram</b>	A diagram used for classification

	identifying whether members of the set possess given properties.	
<b>Vertex</b>	The point at which two sides of a 2-D shape meet or two or more edges of a polyhedron meet.	
<b>Vertical line</b>	A line which is at right angles to a horizontal line.	
<b>Volume</b>	The amount of liquid in a container or the amount of three-dimensional space taken up by an object, measured in cubic units.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>Weight</b>	The force of gravity on an object, measured in newtons.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>x axis</b>	The horizontal line on a graph or coordinate grid.	
<b>Term</b>	<b>Definition</b>	<b>Notes</b>
<b>y axis</b>	The vertical line on a graph or coordinate grid.
